

## Harvard Summer Program Immunology Project Resource Information

<b>Title</b>	Immunology Primer (Mary Anne Lynn)
<b>Resource Type</b>	<input type="checkbox"/> Lesson Plan <input type="checkbox"/> Activity <input type="checkbox"/> Lab Activity <input checked="" type="checkbox"/> Web-quest
<b>Description</b>	The Immune System Primer offers a self-directed study of the Human Immune System. biology students basic knowledge of the various mechanisms the body employs to defend contains links to a number of on-line animations and reference materials.
<b>Author(s)</b>	Mary Anne Lynn
<b>Author Institution(s)</b>	Reading Memorial High School
<b>Objective</b>	<p>The student will be able to:</p> <ul style="list-style-type: none"> <li>• Identify the role each item plays in fighting an infection: skin, mucus, saliva, sweat cells, fever, B cells and T cells</li> <li>• Identify four symptoms of inflammation</li> <li>• Describe the importance of washing one's hands</li> <li>• Explain how Hepatitis A virus is spread</li> <li>• Define the following terms: adaptive immunity, antigen, antibody, histamine, immunolymphocyte, pathogen</li> <li>• Compare and contrast T and B cells</li> <li>• Use leucocytes to describe the process of cell differentiation</li> <li>• Describe the immune response</li> <li>• Identify four major types of infectious agents</li> <li>• Using leucocytes, provide examples of how cell structure is related to function</li> <li>• Compare and contrast plasma and memory cells</li> <li>• Distinguish between a primary immune response and a secondary immune response</li> </ul>
<b>Key Concepts</b>	<ul style="list-style-type: none"> <li>• Hepatitis A is contagious and can be transmitted when food handlers fail to wash</li> <li>• Individuals can be vaccinated against Hepatitis A.</li> <li>• Viruses, bacteria, fungi, protozoa and parasitic worms can be disease-causing agents</li> <li>• The Immune System protects the body against pathogens.</li> <li>• Physical Barriers, and their secretions act as the body's first line of defense against</li> <li>• Innate immunity is activated early in infection. Phagocytic and Natural Killer Cells provide the body with non-specific immunity.</li> <li>• Antigens are foreign substances that elicit an immune response.</li> <li>• Macrophages and B cells are antigen-presenting cells</li> <li>• T helper cells are activated by antigen presenting cells</li> <li>• Lymphocytes provide adaptive immunity against a specific antigen.</li> <li>• Antibodies prevent antigens from attaching to the surface of host cells and/or target</li> <li>• A secondary immune response is faster and more effective than a primary immune</li> </ul>
<b>Student Prep</b>	This activity incorporates aspects of cell structure, function and differentiation and is the has been taught.
<b>Materials</b>	Access to computer with the following programs: shockwave,
<b>Grade level(s)</b>	Grades 9-12
<b>Teacher Prep Time</b>	<p>Minimal,</p> <ul style="list-style-type: none"> <li>• Go through the lessons to ensure that they are clear</li> </ul>

	<ul style="list-style-type: none"> <li>If activity will be completed at school, be sure that computers are loaded with ne</li> </ul>
<b>Class Time</b>	<p>Lesson#1: Invitation to Learn: 15 minutes (5 min to review)  Lesson #2: Non-Specific Immunity: 30 minutes (15 min to review)  Lesson #3: Specific Immunity: 30 minutes (20 min to review)  Lesson #4: Primary and Secondary Immune Response: 20 minutes (10 min to review)</p> <p>Note: Times are estimated as activities have not been done by students, yet.</p>
<b>National Standards</b>	<p><b>National Standards, Level IV Grade: 9-12</b>  <b>Standard 5</b>  <b>Understands the structure and function of cells and organisms</b></p> <p><b>Level IV Grade : 9-12</b></p> <p>1. Knows the structures of different types of cell parts (e.g., cell wall; cell membrane; cy the nucleus, chloroplast, mitochondrion, Golgi apparatus, vacuole) and the functions they materials, storage of genetic information, photosynthesis and respiration, synthesis of ne</p> <p>2. Understands the chemical reactions involved in cell functions (e.g., food molecules tal provide the chemical constituents needed to synthesize other molecules; enzymes facilita molecules)</p> <p>4. Knows how cell functions are regulated through changes in the activity of the function through the selective expression of individual genes, and how this regulation allows cells and to control and coordinate cell growth and division</p> <p>6. Understands the processes of cell division and differentiation (e.g., meiosis, mitosis, e replication and differentiation into the many specialized cells, tissues, and organs that co cell retains the basic information needed to reproduce itself)</p>
<b>State Standards</b>	<p><b>Massachusetts Curriculum Frameworks</b></p> <p>2. Structure and Function of Cells</p> <ul style="list-style-type: none"> <li>2.1 Relate cell parts/organelles to their function</li> <li>2.5 Explain the role of cell membrane as a highly effective barrier</li> </ul> <p>4. Human Anatomy and Physiology</p> <ul style="list-style-type: none"> <li>4.1 Explain how major organ systems in humans have functional units with speci function of that organ system</li> </ul>
